

GRIP-BOX

Modular Solution For Movement

Definitely designed for versatility

The Grip-Box is a revolutionary solution for moving Air/Ground for your cameras but also your lights, LED screens or objects.

Box with access to all functions of modern machinery:

CableCam-Rails-Winches. Using two Box, opt for the magic of movement in two dimensions.

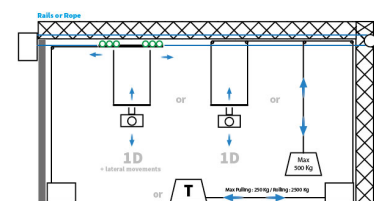

#horizontal

#Vertical 1D / 2D

#Winch 1D / 2D

Compact and connected

You have the R-Motions Control interface. Its ease of use allows you to access all of your motor parameters. You view in real time your movements, your battery capacity, your speed, the value of your joysticks etc.

Plug & Play and intuitive, the system is 100% secure computer and assist you in all your applications. The interface allows you to store up to 12 different positions on your route. You can then launch motion control movements between these 12 positions with a single tap on your touch screen.

Uses

Light, the Box can be attached anywhere and in many different ways. Designed to attach to the "lighting truss", lightness allows you to adapt to the demands of complex movements while respecting budgets. Thus, complex installations become possible simply with lights bridges.

It can also use precision winch with its winch. Everything can move to become Motion Control. Freedom is now in your hands.
